RxHx
Pharmacy Patient Histories Reimagined

RxHx is FirstHx's pharmacy specialty product specifically developed for pharmacists to take an accurate patient history so they can make informed decisions and prescribe and document with confidence.

FirstHx collects a concise history of a clinical health concern and presents it in a formatted and beneficial documented note for the pharmacist.

Why is taking a proper patient history important?

In summary, taking a proper medical history is critical for effective diagnosis, treatment planning, monitoring, and follow-up, as well as patient safety. It is an essential aspect of providing high-quality healthcare.

How it works

RxHx uses an intelligent, adaptive interview process that emulates the in-person clinical encounter and integrates into a pharmacist's clinical workflow.

RxHx is based on FirstHx's **www.firsthx.com** adaptive medical history taking platform.

1. Pharmacy team **sends a text message** with a link to the RxHx solution to the patient.

2. Pharmacy has their own dashboard that manages patients and allows them to **track when a patient has completed their history**. If needed they can resend a patient history request.

3. Patient Receives link to the RxHx solution and completes history.

4. Pharmacists review the history in their pharmacy practice management solution once integrated or in RxHx desktop. The history is a structured note that can be viewed as a text file or PDF, and can be edited and sent as a structured note to a physician.

Benefits

Patients

- Personalized
- Convenient and Confidential
- FirstHx has a 96 percent patient approval rating.
- Multilingual

Pharmacists

- Increases productivity by up to 40%
- Improved completion rates and open rates are as high as 98%
- Improves documentation and compliance.
- Reduces medical errors.

Pharmacy

- Standardized care
- Risk Mitigation
- Structured data
- Better outcomes
- Interoperability
- Improved patient satisfaction

Why is RxHx an adaptive text based intake more effective than static intake forms?

Overall, adaptive patient intake offers several benefits over static forms, including:

Relevant

The solution only asks questions relevant to the patient's condition eliminating questions that are not helpful to the patient. This allows for a more personalized and thorough intake process.

Efficiency

An adaptive patient history can help streamline the intake process by reducing the amount of time and effort required to complete the history. The average time for a patient to complete is under 5 minutes.

Improved accuracy

With an adaptive history, patients are less likely to miss important questions or provide inaccurate information. By presenting questions that are relevant to the patient, the risk of errors and omissions is reduced.

Enhanced user experience

An adaptive history provides a more user-friendly experience for patients. By presenting questions in a logical and easy-to-follow manner, patients are more likely to complete the history accurately and in a timely manner.

Data analysis

Adaptive patient histories can collect data in a structured format, making it easier for healthcare providers to analyze and use the data for patient care and other purposes.

Who we are

Lamina Solutions is partnering with FirstHX **www.firsthx.com** to market and deliver their knowledge based patient medical history platform to pharmacy teams.

Lamina has over 17 years of experience working on eHealth and informatics projects with researchers, specialty associations, life science organizations and pharmacy chains.
